## **WinAuth 2-way Authentication Free License Key**

Make it impossible for somebody to steal your private data without getting caught. With WinAuth, nobody can login to your computer with any other than your unique user account, with a blank password. WinAuth will prevent other people from logging into your PC with other than your unique user account, with a blank password. It is not possible to steal any information or files from your computer without changing the login credentials. How it works: \* WinAuth can prevent unauthorized login with any other than your unique user account, and with a blank password. WinAuth is not visible as a regular windows login screen. \* If the 2 way authentication is not enabled in the WinAuth window, it will change your default login username and password. Only you can use the username and password in WinAuth. WinAuth will not display the username and

---

password. \* WinAuth will automatically delete and log out the computer session when your laptop is removed from the docking station and the dock cable is disconnected. You can choose from: Disabled, when you connect to the docking station and the dock cable is connected. Disabled, when the laptop is not connected to the docking station. \* WinAuth will automatically log out when your laptop is turned off, and the laptop lid is closed. You can choose from: Auto-locked, on when the laptop is turned off, and the laptop lid is closed. Auto-locked, off when the laptop is turned off and the laptop lid is open. \* WinAuth will automatically log you out if you log out of the computer using the on screen windows logon window (sign in to Windows). You can choose from: Log out of computer automatically when you sign out of WinAuth. Auto-locked on when you log out of WinAuth. Log out of computer automatically when the laptop is turned off, and the laptop lid is closed. \* WinAuth will automatically log you out if you log out of

---

the computer using the on screen Windows logon window (sign in to Windows). You can choose from: Log out of computer automatically when you sign out of WinAuth. Auto-locked on when you log out of WinAuth. Log out of computer automatically when the laptop is turned off, and the laptop lid is closed. \* WinAuth can be used as a password replacement. If you cannot remember your password or want to temporarily prevent the loss of your password, WinAuth can be used as a password replacement. If you enable the automatic log out feature when you sign out of WinAuth, you will lose your

### **What's New in the WinAuth 2-way Authentication?**

WinAuth 2-way Authentication is a tiny and inexpensive tool to secure your personal computer from access by unauthorized users. It enables two-factor authentication and lets you specify the passcode on the logon screen. WinAuth 2-way Authentication Features: 1) 2-way

---

authentication enables users who are not granted access to your computer to access it. 2) In the event that the user already has access, the application will only ask them to enter their USB logon key 3) The tool can be used on multiple devices 4) A user can have a list of passwords that can be applied on various operating systems 5) The application enables you to modify the login screen background with your favorite picture or color 6) The application lets you customize the password 7) The application enables you to set the desktop gadget, AutoLock on key remove, and the password login 8) The application supports password masking 9) It allows you to specify the username, password and USB logon key 10) It allows you to specify the background of the lock screen, i.e. the login screen 11) The application is free to download and is bundled with a pre-requisite application 12) The application also works on multiple devices 13) The application supports multiple users 14) The application enables you to add passwords for different

---

users, e.g. your friend 15) The application supports logons on different operating systems 16) The application can be accessed easily 17) The application is easy to use In the eventuality that you are working from home or need to travel frequently and use a laptop, then there is a good chance that you need to make sure nobody can access sensitive information about your company.

WinAuth 2-way Authentication is a lightweight piece of software designed to help you improve the security of your work computer by adding an extra password on the Windows login screen. Enable and disable protection with just one click While the setup is straightforward, you should make sure to install the bundled pre-requisite application so that the tool works correctly. On the first launch, the tool prompts you to specify the username, desired password and the USB logon key. In case you are unable to view them in the login screen of the app, then do not forget to refresh it. Once logged in, you can toggle the authentication, desktop gadget, Android login,

---

AutoLock on key remove and the password login on and off whenever necessary. Customize the background of the Lock screen It is worth mentioning that the program allows you to add your favorite background for the lock screen. Even though you may think this is nothing more than an aesthetic trick, in reality, this can also help you determine whether the 2-way authentication is enabled or disabled. The application supports multiple users, so if several people are using the computer, then each of them can use their own password when accessing the computer. Moreover
